PROFESSIONAL SUMMARY

Full Stack Developer who builds, integrates, deploys and maintains production business applications. At Montera Group I develop the company ERP, sales and profit dashboards and internal tools end to end, from web UI and PHP backend to MySQL, marketplace and Meta APIs, and the Ubuntu server they run on. Known for accurate data: every report is reconciled against its source until the difference is zero.

WORK EXPERIENCE

Full Stack Developer Jul 2026 – Present

Montera Group (Skinlyfe & Prepare) · Full-time

- Developed and maintained the company ERP (CodeIgniter, MySQL, JavaScript): web dashboards and back-office screens plus real-time sync of Shopee and TikTok Shop orders, waybills, stock and payouts.
- Built sales and net-profit reporting (COGS, platform fees, payouts, ad spend) with daily automated reconciliation against the marketplace APIs; dashboard totals match Seller Center order for order.
- Automated daily reporting for 40+ Meta ad accounts with the Graph API and Google Apps Script, including two-way Google Sheets sync, monthly rollover and TikTok Ads validation.
- Built HR attendance (face-verified clock-in, office Wi-Fi/GPS presence check) and warehouse workflows (barcode scan stations, shipping labels, waybill tracking).
- Built a shared WhatsApp inbox for six affiliate team numbers using Node.js, Baileys, MySQL and WebSocket.
- Administered the production Ubuntu server: Apache, SSL, UFW and fail2ban, security patching and encrypted daily off-site backups.

IT Trainer (Volunteer) Jan 2025 – Apr 2025

5 schools in Jakarta & Tangerang

- Trained 163+ vocational students in 3-day intensive web development programs (HTML, CSS, JavaScript, responsive design) at El-Rasyad Jakarta, Qurrota A'yun, Al Anwar Bina Mulia, SMK Islam Insan Mulia and SMK Hiro Tangerang.
- Designed project-based curricula where students built a working portfolio or web app by the end of each program.

TECHNICAL SKILLS

Frontend:	HTML5, CSS3, JavaScript, Bootstrap, Tailwind CSS, React, Next.js
Backend:	PHP (CodeIgniter, Laravel), Node.js, REST APIs, Webhooks, WebSocket
Database:	MySQL, PostgreSQL, Firebase Firestore
Integrations:	Shopee Open Platform, TikTok Shop, Meta Graph / Marketing API, Google Apps Script, WhatsApp (Baileys)
DevOps & Tools:	Ubuntu Server, Apache, SSL, UFW, fail2ban, Git, GitHub, Figma
Mobile:	Flutter (Dart)

PROJECTS

JNE Attendance System (team of 5, IDN UJIKOM 2026) – Face-detection and GPS-geofenced attendance app for JNE Hub Martapura. Built the first version of the Flutter employee app: login, onboarding, face enrollment, attendance, leave and history screens. *Flutter, Firebase, Next.js.* github.com/NabihanN06/jne_attandance
